SKILLS

Front-End

Development: JavaScript (ES6+), TypeScript, React, React Native, HTML5, CSS3, Responsive Design, Git

UX & Product Design: User Research, Wireframing, Prototyping, Information Architecture, Accessibility, Interaction Design, Design Systems

AI-Engineering Tools: AI-assisted software development, Prompt Engineering, Rapid prototyping, AI workflow optimization, Human-in-the-loop code review, Feature planning, Documentation generation

PROFESSIONAL SUMMARY

Front-End Software Engineer and UX Designer with experience designing, developing, and shipping responsive web and mobile applications from concept through deployment. Skilled in React, React Native, JavaScript, TypeScript, HTML, CSS, REST APIs, and modern front-end engineering, with a strong foundation in user-centered design. Passionate about building intuitive digital products that combine thoughtful UX, scalable software architecture, and modern engineering practices. Experienced using AI-assisted development workflows to accelerate planning, debugging, documentation, and testing while maintaining high standards for code quality. Continuously expanding technical expertise through hands-on product development and emerging technologies.

TECHNICAL HIGHLIGHTS

- Designed and developed full-stack web and cross-platform mobile applications from concept through deployment.
- Built OCR-assisted workflows integrating external APIs, intelligent search logic, caching strategies, and automated testing.
- Combined UX research with front-end engineering to create intuitive, user-centered digital experiences.
- Leveraged AI-assisted development workflows to accelerate feature planning, debugging, refactoring, documentation, and testing while validating implementations through manual review and automated tests.
- Continuously improving software engineering skills through independent product development, modern development practices, and emerging AI technologies.

FEATURED PROJECT

Magic: The Gathering Collection Manager (*Current Project*)
Cross-Platform Mobile Application
React Native · TypeScript · Expo · REST APIs · Jest
2025 - Present

Designed and developed a cross-platform mobile application that helps users scan, organize, and manage Magic: The Gathering collections while simplifying deck building and collection management through intelligent automation and user-centered design.

Key Contributions

- Built a cross-platform mobile application using React Native, TypeScript, and Expo.
- Designed the complete end-to-end user experience for collection management, OCR scanning, manual correction workflows, deck building, and AI-assisted features.
- Integrated the Scryfall REST API to retrieve live card data and support intelligent collection management.
- Developed OCR-powered recognition workflows featuring exact matching, intelligent fallback search logic, and manual correction to improve scan reliability.
- Architected modular service layers and reusable UI components to improve maintainability, scalability, and future feature development.
